Resident Notification System

In the world we live in today, concerns about safety and security are paramount. The Resident Notification System (RNS) is a state-of-the-art communications support system offered by The Ferrara Management Group, Inc. Through this innovative system, managers keep owners, shareholders, residents, and employees informed in the event of emergencies or other critical situations within minutes. RNS delivers notifications of power outages, water shut downs, service interruptions, snow removal/weather conditions, etc. instantly via voice, text, and email. While essential for issuing these alerts, RNS also allows residents to stay informed about community events, meetings, and other important matters.

Should you wish to enroll in RNS, please complete the enrollment form below and select which method of notification you prefer. You have the option of receiving notifications either by text messaging, e-mail, or voice alert - or can receive all three types of alerts simultaneously. Text and e-mail alerts will be sent in English, should you wish to have it sent in another language please indicate below and we will try to accommodate. Please print clearly when completing the form.
